

ENVIRONMENTAL BEHAVIOUR GUIDE

MATERIAL SUPPLIER

TECNOBIT has implemented an Environmental Management System under ISO 14001, which has been certified by the Spanish Standards and Certification Agency, AENOR. This system contains the environmental behaviour guidelines to be followed by providers when undertaking their activities.

These guidelines are indicated below. All **TECNOBIT** suppliers must be familiar with and observe them:

- Activities must be undertaken in an environmentally responsible manner.
- Where applicable, the service provider must be a registered hazardous waste producer.
- All waste generated must be segregated, identified and stored in accordance with current regulations, prioritising recycling as opposed to disposal.
- Inert industrial waste must be delivered to authorised transport managers/collectors. Proof of its management must be kept.
- Hazardous waste must be delivered to authorised transport managers/collectors. Suppliers must have the acceptance document for the hazardous waste generated.
- The water, power and other resources needed to undertake activities must be used responsibly.
- Materials must be packaged in the most environmentally efficient manner possible.
- Goods must be transported using efficient means of transport and taking into account environmental criteria.
- Emissions produced by combustion vehicles must not exceed legal limits. These vehicles must pass the MOT gas analyser test and carry a record of the same.
